

Serial No.: 10/729,035
Docket No.: ECV-5413CIP2CONI
Amendment and Election dated March 1, 2006
Responsive to Office Action dated February 3, 2006

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

5 **Listing of claims:**

1. (Original) A prosthetic heart valve, comprising:
a flexible stent having alternating inflow cusps and outflow commissures;
a plurality of flexible leaflets attached to the stent so as to form a one-way valve
10 within the stent; and
a suture-permeable connecting band attached to the stent providing an interface
between the valve and surrounding host tissue;
wherein the connecting band conforms to the alternating stent cusps and
commissures and defines an axial gap along the commissures opening in the inflow
15 direction for enhancing freedom of movement of the stent cusps.

2. (Original) The prosthetic heart valve of claim 1, wherein there are three stent cusps
and three commissures.

20 3. (Original) The prosthetic heart valve of claim 1, wherein the connecting band
includes three cusp portions separated by three upstanding commissure portions, and wherein the
cusp portions each define an inner generally radially oriented ledge for receiving and supporting
the stent cusps.

25 4. (Original) The prosthetic heart valve of claim 3, wherein the connecting band
further includes outer free margins that are angled upwardly and outwardly with respect to a
central axis of the connecting band at each cusp portion and gradually re-align to be parallel to the
central axis along the commissure portions.

Serial No.: 10/729,035
Docket No.: ECV-5413CIP2CON1
Amendment and Election dated March 1, 2006
Responsive to Office Action dated February 3, 2006

5. (Original) The connecting band of claim 1, wherein the stent has bioresorbable commissures and is designed to separate the valve into individual leaflets after implant, and the connecting band is discontinuous at the stent commissures.

5

6. (Original) The prosthetic heart valve of claim 1, wherein the stent comprises a fabric covered rod-like structure.

7. (Original) The prosthetic heart valve of claim 6, wherein the fabric covering closely
10 surrounds the rod-like structure and exhibits a flap projecting outward therefrom substantially the entire length of the stent cusps and commissures.

8. (Original) The prosthetic heart valve of claim 7, wherein the flap has a width that varies along the cusps and commissures of the stent, the flap being narrower in the cusps.

15

9. (Original) The prosthetic heart valve of claim 7, wherein the leaflets each have an arcuate cusp edge and a coapting edge, and wherein the connecting band attaches along the fabric covering flap and the cusp edges of the leaflets are attached between the band and the stent flap.

10. (Original) The prosthetic heart valve of claim 7, wherein the connecting band
20 attaches along the fabric covering flap and has a free margin extending outward from the stent along the alternating cusps and commissures for connecting the heart valve to an anatomical orifice.

11. (Original) The prosthetic heart valve of claim 1, wherein the stent is highly flexible
25 and permits relative radial cusp movement.

Serial No.: 10/729,035
Docket No.: ECV-5413CIP2CON1
Amendment and Election dated March 1, 2006
Responsive to Office Action dated February 3, 2006

12. (Original) The prosthetic heart valve of claim 11, wherein the stent is made of Nitinol.

13. (Previously presented) A highly flexible prosthetic heart valve, consisting
5 essentially of:

a flexible elongated stent formed generally in a tube with cusp regions on an inflow end alternating with commissure tips on an outflow end to form an undulating periphery, the stent having commissure regions on either side of each cusp region wherein the commissure tips join adjacent commissure regions and the juxtaposed commissure regions
10 define axial spaces therebetween;

a plurality of flexible leaflets attached to the stent so as to form a one-way valve within the stent; and

a suture-permeable band attached along the undulating periphery of the stent so as to project outward from the stent and adapted to provide an interface between the valve
15 and surrounding host tissue.

14. (Original) The prosthetic heart valve of claim 13, wherein the band includes arcuate cusp portions generally conforming to the stent cusp regions and commissure portions therebetween each having an inverted U-shape to define a downwardly opening gap that enhances
20 flexibility of the valve.

15. (Original) The prosthetic heart valve of claim 14, wherein the commissure portions of the band are generally planar and axially aligned, and the cusp portions of the band each include an outwardly angled portion and an inwardly angled ledge sized to support the stent cusp regions.
25

16. (Original) The prosthetic heart valve of claim 15, wherein the inwardly angled ledges of the cusp portions of the band are sized to support the stent cusp regions.

Serial No.: 10/729,035
Docket No.: ECV-5413CIP2CON1
Amendment and Election dated March 1, 2006
Responsive to Office Action dated February 3, 2006

17. (Original) The prosthetic heart valve of claim 15, wherein the suture-permeable band has a free margin along the undulating periphery for connecting the heart valve to an anatomical orifice.

5 18. (Original) The prosthetic heart valve of claim 13, wherein the axial spaces are generally triangular and gradually increase in size from the attached commissure tips to the diverging cusp regions.

10 19. (Original) The prosthetic heart valve of claim 13, wherein the stent is highly flexible and permits relative radial cusp movement.

20. (Original) The prosthetic heart valve of claim 19, wherein the stent is made of Nitinol.

15 21. (Original) The prosthetic heart valve of claim 13, wherein the stent has bioresorbable commissures and is designed to separate the valve into individual leaflets after implant, and the suture-permeable band is discontinuous at the stent commissures.

20 22. (Original) The prosthetic heart valve of claim 13, further comprising a fabric covering on the stent that exhibits a flap projecting outward therefrom substantially the entire length of the undulating periphery.

25 23. (Original) The prosthetic heart valve of claim 22, further comprising a plurality of flexible leaflets attached to the stent so as to form a one-way valve within the stent wherein the leaflets each have an arcuate cusp edge and a coapting edge, and wherein the suture-permeable band attaches along the fabric covering flap and the cusp edges of the leaflets are attached between the band and the stent flap.

24.-30. (Cancelled)
